

NexLog Application Note

IP Call Recording for TELEX Dispatch

Eventide NexLog communications recording systems support call recording for TELEX dispatch consoles and gateways. IP audio streams are reliably captured, recorded and archived. Recordings are instantly available for replay, research, incident reconstruction, and export. The same NexLog system can also record telephones, radio and PC screens.

Audio Capture Method:

- Recording of IP Multicast audio; compatible with Telex IP-223 and IP-224 units.

Audio Formats Supported:

- G.711 (64kbps), 32kbps ADPCM.

Metadata Captured:

- Frequency channel number.
- Source device's IP address.
- Line (correlates to Multicast group + Port Number).
- PTT ANI (where available).

NexLog as Network Recorder:

NexLog IP-call recorders are popular alternate solutions for legacy Network Recorders. More than 100 Eventide recording systems have been installed with Telex Dispatch systems.
