

NexLOG Application Note

Call Recording for the Tait DMR Tier III Radio System

NexLog IP-based call recording systems provide archival and instant recall recording for TAIT DMR Tier III digital trunked radio systems. IP-audio and metadata that are sent from the DMR Node's Voice Recording Interface are reliably recorded and archived. Recordings are instantly available for replay, research, incident reconstruction and export. The same NexLog system can also record dispatch consoles, telephones and PC screens.

Audio Capture Method:

- Recording of IP audio feeds via the Tait DMR Voice Recording Protocol

Codec Support:

- AMBE+2 Vocoder (DMR Standard)

Metadata Search Parameters:

- Radio ID
- Destination ID or Group ID
- Date & Time

About Eventide:

Eventide is a member of the Tait Global Partner Program, and is an OEM supplier to Tait.
